

Engineers win the satisfaction of specifying stainless steel quality at black iron prices.

Contractors win the ability to reduce labor costs, speed up the schedule and eliminate punch list items.

FlexHead flexible fire sprinkler connections install at least 4 times faster than hard-pipe armovers.

Owners win the rewards of moving in sooner, reducing maintenance costs and slashing reconfiguration expenses.

Everybody Wins.

Don't you just love it when something comes along that not only benefits you, but pays dividends to vendors, partners and clients alike? That's the beauty of FlexHead flexible sprinkler connections. Whether you're building new or retrofitting old, faster-installing FlexHead connectors make life better for everyone concerned.

Engineers

FlexHead is the only flexible fire sprinkler connection seismically qualified for use. Other benefits include simplified project management, fast track construction and cost effective code compliance.

Contractors

Because you can install four or more FlexHead connections in the time it takes to install one hard-pipe connection, FlexHead slashes installation costs. Higher productivity means higher profitability. Plus, it's a snap to have perfect center-of-tile placements every time.

Owners

Faster installation means shorter time to occupancy. Stainless steel construction means higher quality and reliability. And flexible connections permit easier reconfigurations as your space needs change.

If you haven't been using FlexHead fire sprinkler connections, you've been losing out. Call us, write us or visit our website to get the winning edge.
